

MANIPAL UNIVERSITY JAIPUR																												
School of Computing & IT																												
IV Semester B. Tech Make up Examination							July-2017																					
CS 1401 Operating Systems Branch: CSE / IT /CCE																												
Solution																												
Duration: 3hrs					Max Marks: 80																							
Notes: 1. Answer any FIVE full questions. Numbers in [] indicates marks. 2. Missing data, if any, may be suitably assumed. Course instructor shall not be called. 3. At most three units of bounded references are allowed.

2.	a	<p>a. $32 * 2048 = 2^5 * 2^{11} = 2^{16}$ Therefore, 16 bits are needed for the logical address.</p> <p>b. $32 = 2^5$, therefore 5 bits are needed for logical address.</p> <p>c. $8 * 2048 = 2^3 * 2^{11} = 2^{14}$, therefore 14 bits are needed for physical address.</p> <p>d. By allowing two entries in a page table to point to the same frame in the memory, processes can share code and data</p>	[8]																																																																																																																																																																								
	b	Twenty bits are used for the virtual page numbers, leaving 12 over for the offset. This yields a 4K page. Twenty bits for the virtual page implies 2^{20} pages.	[8]																																																																																																																																																																								
Q 3.		<p>Given reference to the pages by a program as 1,2,3,4,5,3,4,1,6,7,8,7,8,9,7,8,9,5,4,5,4,2. How many page faults will occur in OPTIMAL, FIFO and LRU page replacement policies, if the program has four page frames available to it?</p> <p>Solution:- FIFO:</p> <table><tr><td>F.no</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>0</td><td>1</td><td>1</td><td>1</td><td>1</td><td>5</td><td>5</td><td>5</td><td>5</td><td>8</td><td>8</td><td>8</td><td>8</td><td>2</td></tr><tr><td>1</td><td></td><td>2</td><td>2</td><td>2</td><td>2</td><td>1</td><td>1</td><td>1</td><td>1</td><td>9</td><td>9</td><td>9</td><td>9</td></tr><tr><td>2</td><td></td><td></td><td>3</td><td>3</td><td>3</td><td>3</td><td>6</td><td>6</td><td>6</td><td>6</td><td>5</td><td>5</td><td>5</td></tr><tr><td>3</td><td></td><td></td><td></td><td>4</td><td>4</td><td>4</td><td>4</td><td>7</td><td>7</td><td>7</td><td>7</td><td>4</td><td>4</td></tr><tr><td></td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td></tr></table> <p>Page Fault = 13 LRU -----(4 marks)</p> <table><tr><td>F.no</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>0</td><td>1</td><td>1</td><td>1</td><td>1</td><td>5</td><td>5</td><td>6</td><td>6</td><td>6</td><td>6</td><td>5</td><td>5</td><td>5</td></tr><tr><td>1</td><td></td><td>2</td><td>2</td><td>2</td><td>2</td><td>1</td><td>1</td><td>1</td><td>1</td><td>9</td><td>9</td><td>9</td><td>9</td></tr><tr><td>2</td><td></td><td></td><td>3</td><td>3</td><td>3</td><td>3</td><td>3</td><td>7</td><td>7</td><td>7</td><td>7</td><td>4</td><td>4</td></tr><tr><td>3</td><td></td><td></td><td></td><td>4</td><td>4</td><td>4</td><td>4</td><td>4</td><td>8</td><td>8</td><td>8</td><td>8</td><td>2</td></tr><tr><td></td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td><td>F</td></tr></table> <p>Page Fault: 13 Optimal: -----(4 marks)</p>	F.no														0	1	1	1	1	5	5	5	5	8	8	8	8	2	1		2	2	2	2	1	1	1	1	9	9	9	9	2			3	3	3	3	6	6	6	6	5	5	5	3				4	4	4	4	7	7	7	7	4	4		F	F	F	F	F	F	F	F	F	F	F	F	F	F.no														0	1	1	1	1	5	5	6	6	6	6	5	5	5	1		2	2	2	2	1	1	1	1	9	9	9	9	2			3	3	3	3	3	7	7	7	7	4	4	3				4	4	4	4	4	8	8	8	8	2		F	F	F	F	F	F	F	F	F	F	F	F	F	[12]

	b	Safe Sequence is : P1-> P3-> P4-> P5-> P2	[8]																																																																																																																									
	c	No, if process P1 requests (0,4,2,0) for resources (A,B,C,D), it cannot be satisfied as the request is greater than its need.	[6]																																																																																																																									

<p>Q 5.</p>	<p>Disk requests come into the disk driver for cylinders: 10, 22, 20, 2, 40, 6, 38 in that order. The disk has 60 total cylinders and the disk head is currently positioned over cylinder 20. A seek takes 6 milliseconds per cylinder moved. What is the sequence of reads and total seek time using each of the following algorithms:- a) FCFS, b) SSTF, c) LOOK, d) SCAN</p> <p>Solution:</p> <p>a) First-come, first-served: 10, 22, 20, 2, 40, 6, 38 $10 + 12 + 2 + 18 + 38 + 34 + 32 = 146$ cylinders = 876 milliseconds.</p> <p>b) Shortest Seek Time First: 20, 22, 10, 6, 2, 39, 40 $0 + 2 + 12 + 4 + 4 + 36 + 2 = 60$ cylinders = 360 milliseconds.</p> <p>c) LOOK (initialing moving upwards): 20, 22, 38, 40, 10, 6, 2 $0 + 2 + 16 + 2 + 30 + 4 + 4 = 58$ cylinders = 348 milliseconds.</p>	<p>[16]</p>
<p>6</p>	<p>a Two processes X and Y need to access a critical section. Consider the following synchronization construct used by both the processes. Does the following solution satisfy entire three requirements of critical section problem? Justify your answer.</p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="border: 1px solid black; padding: 10px; width: 30%;"> <p>Process X</p> <pre>while (true) { varP = true; while (varQ == true) { /* Critical Section */ varP = false; } }</pre> </div> <div style="border: 1px solid black; padding: 10px; width: 30%;"> <p>Process Y</p> <pre>while (true) { varQ = true; while (varP == true) { /* Critical Section */ varQ = false; } }</pre> </div> </div> <p>Solution:</p> <p>When both processes try to enter critical section simultaneously, both are allowed to do so since both shared variables varP and varQ are true. So, clearly there is NO mutual exclusion. There is no bounded wait and progress.</p>	<p>[8]</p>

	<p>b Write a Program to create two processes to run a loop in which one process adds all even numbers and the other adds all the odd numbers in a series of numbers from 1---20. (Hint: use fork ())</p> <pre> #include <stdio.h> int main() { int sum1=0,sum2=0,sum=0; int id,i; id=fork(); if(id==0) { for(i=0;i<20;i=i+2) { sum1=sum1 + i; } printf("Parent Sum : %d\n",sum1); } else { for(i=1;i<20;i=i+2) { sum2=sum2 + i; } printf("Child Sum : %d\n",sum2); } } </pre>	<p>[8]</p>
